BB Ltd is a business organised with three divisions and a head office. The divisions are based on market groupings; retail, wholesale and government. The divisions do not trade with each other. The main method of control of the divisions has been the requirement to earn a return on investment (ROI) of 15% p.a. The definition of return and capital employed is provided by head office, at the criterion ROI rate of 15%.

The recent experience of BB Ltd, is that the group as a whole has been able to earn the 15% but there have been wide variations between the results obtained by different division. This infringes another group policy that forbids cross-subsidization, i.e. each and every division must earn the criterion ROI. BB Ltd is now considering divestment strategies and this could include the closure of one or more of its divisions.

The head office is aware that the Boston Product Market Portfolio Matrix (BPMPM) is widely used within the divisions in the formulation and review of marketing strategies. As it is so widely known within the group and is generally regarded by the divisions as being useful, the head office is considering employing this approach to assist in the divestment decision.

You are required to:

i. Evaluate the BB Ltd and the adoption of the concept of ROI and its policy that forbids cross subsidization.

ii. Recommend, and justify, two other models that could be used in making a divestment decision. Demonstrate how BB Ltd could utilize these models to make this decision. **(14 marks)**
